- 45 S.22.01.21 Impact of long term guarantees and transitional measures
- 46 S.23.01.01 Own funds
- 47 S.25.01.21 Solvency Capital Requirement – for undertakings on Standard Formula
- 48 S.28.01.01 Minimum Capital Requirement – Only life or only non-life insurance or reinsurance activity
- 48 S.28.01.01 Overall MCR calculation

Summary

The present report is published in accordance to the law on the insurance sector of 7 December 2015. This law introduced a new Supervisory framework (referred to as Solvency II) with effective date on 1 January 2016.

Over 2017, Swiss Life (Luxembourg) S.A. (the Company) continued to develop its key business lines in the area of employee benefits and private wealth solutions with a gross written premium of EUR 1 827 million and a net profit of EUR 18.7 million. Details on the business performance can be found in section A of this report.

As an affiliated company of the Swiss Life Group, the governance system in place plays a central role in the day-to-day activities of the Company. The Company is integrated in a comprehensive system of directives within the Swiss Life Group comprising legal requirements from Solvency II. In section B, descriptions and details on the system of governance are provided with a particular attention to the key roles and functions within the Company (the Board of Directors and the related committees, the risk management, compliance and actuarial functions) as well as the policies in place with regards to remuneration and outsourcing of critical activities.

As a result of a regular Own Risk and Solvency Assessment (ORSA) lead by the Board of Directors, the risk profile of the Company is established. The risk profile provides key information on the nature and the materiality of the risks the Company is exposed to and plays an important role in managing these risks. The risk profile of the Company is described under section C and has not changed in comparison to last year. The main risks are market risk, underwriting risk and strategic risk entailed by the Company's growth strategy.

Under Solvency II, the balance sheet of the Company is valued from an economic perspective. The balance sheet as presented in the Financial Statements (statutory figures) is therefore restated to reflect adequately the principles provided by the law. The statutory balance sheet on 31 December 2017 valued at EUR 13 898 million is valued at EUR 13 970 million according to the Solvency II principles. Section D provides a description of the main valuation principles applied as well as the deviations to the statutory values for the relevant items of the balance sheet.

With a level of eligible own funds of EUR 255.2 million and a Solvency Capital Requirement of EUR 182.3 million, the Company shows a good solvency coverage of 140%. This level of Solvency coverage illustrates the Company's capital adequacy with regards to its risk exposures. In section E on capital management, more insights on the solvency situation and the available Own Funds are available.

A Business and Performance

A.1 Business

Swiss Life (Luxembourg) S.A. (the Company) is an insurance company incorporated in the Grand Duchy of Luxembourg on 27 March 1985, as a limited liability company (société anonyme).

The Company is under the supervision of the Luxembourg Supervisor, the Commissariat aux Assurances (CAA)¹. The statutory accounts are audited by PricewaterhouseCoopers (PwC)². The Solvency II results published in this report have not been audited.

The Company belongs to the Swiss Life Group and is ultimately fully owned by Swiss Life Holding AG as shown in Annex Holding structure. The Swiss Life Group is under the supervision of the Swiss Financial Market Supervisory Authority FINMA³.

The Company's activities consist of life insurance business with a focus on two main client segments: group life business and private wealth individual life insurance.

The first activity consists in providing comprehensive group benefits solutions for local and mobile employees of multinational corporations. The local and cross-border solutions offered from Luxembourg include life insurance, disability and retirement covers. These are designed as flexible modular programmes, tailored to each client's needs. This activity also includes:

- the administration of the Swiss Life Network which offers pooling solutions for multinational corporations employee benefits schemes. The Swiss Life Network is a global association of more than 60 local insurers and business partners covering 70 countries and territories;
- the administration of the Swiss Life International Pension Fund Asbl, a pension fund under the supervision of the Commissariat aux Assurances.

The second main activity consists in providing high-end life insurance solutions to wealthy individuals as target clients investing mainly in dedicated funds. The Company designs tailored and sophisticated solutions to accommodate clients' wealth management and succession planning needs. Together with selected partners from renowned financial institutions and advisors, life insurance is combined with a wide range of investment opportunities to accommodate the requirements of the Company's clients and their trusted advisors. The main distribution partners are private banks, asset managers, brokers and family offices. Under this segment, the Company offers unit-linked, mainly dedicated funds solutions.

In September 2016, Swiss Life Group launched the new sub-brand Swiss Life Global Solutions. Swiss Life Global Solutions in Luxembourg includes the activities presented above:

- Global Employee Benefits Solutions,
- Global Private Wealth Solutions.

¹ CAA, 7 boulevard Joseph II, L-1840 Luxembourg, (+352) 22 69 11 1, caa@caa.lu, www.caa.lu

² PwC, 2 rue Gerhard Mercator, L-2182 Luxembourg, (+352) 49 48 48 1, www.pwc.lu

³ FINMA, Laupenstrasse 27, CH-3003 Berne, (+41) 313279100, info@finma.ch, www.finma.ch

Swiss Life (Luxembourg) S.A. operates internationally for both activities following the freedom to provide services. The main markets where dedicated products exist for the freedom to provide services are Finland, France, Italy, Spain and the United Kingdom. The Company also offers solutions for other countries without active prospecting if requested.

A.2 Underwriting Performance

The following table provides a summarised technical profit and loss account for the year 2017, split by material lines of business. The detailed figures are available in the Financial Statements 2017 of the Company and in Annex Profit and loss accounts.

Swiss Life (Luxembourg) S.A. presents the result of the financial year 2017, a strong net profit of EUR 18.7 million (EUR 15.6 million in 2016). This confirms the Company's robustness and stability in a challenging economic environment.

Increasing the asset base, maintaining the fee level and a strict cost management led to this result. The low-interest environment still affects the evolution of the investment margin, as the regular interest income decreases faster than the level of the guarantees. However, the Company successfully preserved a strong net margin after policyholders' participation.

In terms of lines of business, regarding the risk inherent to the different products, usually the Company differentiates between unit-linked business and non unit-linked business. This defines the level of detail shown in this table and which will be used for the residual part of the report, unless stated differently.

Technical Result

In EUR thousand			31.12.2017	31.12.2016
	Unit-linked	Other life insurance (with and without profit sharing)	Total	Total
TECHNICAL ACCOUNT – LIFE INSURANCE BUSINESS				
Earned premiums, net of reinsurance	1 469 232	187 289	1 656 521	1 345 320
Net investment income (including investment charges)	266 279	6 815	273 093	337 305
Net other technical income, net of reinsurance	1 843	2 247	4 090	3 849
Claims incurred, net of reinsurance	-734 850	-87 568	-822 418	-1 322 268
Changes in other technical provisions, net of reinsurance	-962 659	-85 562	-1 048 221	-305 711
Net operating expenses	-28 621	-10 227	-38 848	-36 827
Balance on the technical Account – Life Insurance Business	11 223	12 994	24 217	21 669

The following table provides information on the main geographical areas in terms of premiums. The countries that are represented are the five ones with the largest premium income in 2017.

Premiums, claims and expenses by Country

In EUR thousand

	Luxembourg	France	United Kingdom	Gibraltar	Turkey
Earned premiums, net of reinsurance	173 747	481 327	231 509	111 780	103 251
Claims incurred, net of reinsurance	-75 463	-159 277	-8 808	0	-663
Net operating expenses	-6 769	-9 375	-2 284	-608	-584

In comparison to 2016, the five largest countries represented in this section changed: Portugal and Finland are replaced by Gibraltar and Turkey following new contracts written in 2017.

A.3 Investment Performance

In this section, the investment result shown is only in relation with the general assets of the Company (i.e. excluding the ones covering unit-linked business).

In 2017, focus has been set on a prudent but constant diversification of the investments held in the portfolio, compensating for the low interest rate environment. Since 2015, new investments in corporate loan funds were initiated; in 2016 the diversification was continued by increasing the exposure to real estate funds and by introducing a small exposure to infrastructure funds. In 2017, the investments in real estate funds and infrastructure funds were increased further.

The following table provides the investment result 2017 by asset class.

Investment Performance

In EUR thousand

	31.12.2017	31.12.2016
Bonds		
Investment income	28 220	28 738
Net realised gains / losses	2 681	-84
Net realised gains / losses at fair value through profit or loss		
Collective Investment Undertakings		
Investment income	1 118	775
Net realised gains / losses	105	365
Net realised gains / losses at fair value through profit or loss	-300	-726
Cash		
Investment income	-309	-365
Investment expenses	-1 116	-1 118
Investment result	30 699	27 585

Swiss Life (Luxembourg) S.A. has no investments in securitisation.

The investment income on bonds is lower in comparison to 2016, this is due to lower yields on new investments. Exceptional profit came in 2017 from realised gains.

The dividends paid by investment funds increased following the higher exposure in this asset class. The net realised losses in 2017 consisted in an impairment on one of the corporate loan funds, whereas in 2016 they consisted mainly in the recognition of the entry commission in real estate funds.

The investment income of cash consists mainly in asset management and back office fees, banking fees and interests.

Investment expenses are stable in comparison to 2016.

A.4 Performance of other activities

The profit before tax increased by 26.9% to EUR 25.5 million (EUR 20.1 million in 2016) while the net profit increased at EUR 18.7 million (+20% in comparison to EUR 15.6 million in 2016).

Other Results

B System of Governance

Swiss Life Group complies with accepted standards of corporate governance and, in the interests of its shareholders, policyholders and staff, attaches great importance to the requirements entailed in terms of its management and organisation.

As part of the corporate governance, Swiss Life operates a directives system to regulate the functional management throughout the Group and to define the content-related and organisational principles, standards and topics. Swiss Life (Luxembourg) S.A. implemented the principles, standards and topics in its own local directives system, taking into account local law and regulations as well as local business specifications. Specific adjustments are examined on an on-going basis in order to adapt the management and control tools and disclosure to current circumstances and to implement further improvements.

Finally, each local entity ensures a full and permanent application of the Group framework and is responsible to implement specific processes and controls for compliance with local law and regulations such as CAA circular letters for example.

B.1 General information on the system of governance

The Board of Directors is the body in charge of administration, supervisory and management of the Company. The Board of Directors is vested with the broadest powers to perform all acts of administration and disposal in compliance with the Company's corporate objects.

All powers not expressly reserved by the applicable laws or by the Articles of Association to the general meeting of shareholders fall within the competence of the Board of Directors, as for example any acts relating and/or instrumental to the extraordinary disposal of the Company's own assets and/or the establishment of liens, encumbrances or security thereon.

In particular, the Board of Directors will monitor the compliance of the Company's operations with applicable laws, EIOPA⁴ Guidelines on the System of Governance and the Articles of Association and provide in this respect relevant directives and instructions regarding risk control and risk management. Furthermore, the Board of Directors will ensure the establishment of adequate audit functions with respect to the Company's operations.

The Board of Directors has delegated powers to the following organisms:

- to *the Comité de Direction*: the definition of the Company's strategic objectives and the responsibility for the implementation of the relevant strategy as well as the performance monitoring of the Global Private Wealth Solutions and Global Employee Benefits Solutions business lines in Luxembourg;
- to *the Délégués à la Gestion Journalière*: all powers to act in the name of the Company and to carry out and approve all acts and operations pertaining to the Company's daily management and consistent with the Company's corporate object in accordance with the terms of the Articles of Association.

⁴ The European Insurance and Occupational Pensions Authority, EIOPA, is the European Supervisor for the insurance and occupational pensions sector. www.eiopa.europa.eu

Three additional committees are operating within the Company, other committees are currently under review:

- *Private Wealth Management Team*: this committee is an ultimate decision making body responsible for the business matters in relation to individual insurance activities for the Global Private Wealth Solutions segment.
- *Global Employee Benefits Management Team*: this committee is an ultimate decision making body responsible for the business matters related to the Global Employee Benefits Solutions business.
- *Audit Committee* reporting directly to the Board of Directors, established in accordance with the law of the Grand Duchy of Luxembourg of 23 July 2016. Its functions and responsibilities are outlined by Article 52 (6) of the precited law, and include the following:
 - communication to the Company's Board of Directors of the results of the statutory audit and explanations of the role played by the Audit Committee in this process;
 - monitoring of the financial reporting process and making recommendations or proposals to ensure its integrity;
 - monitoring of the effectiveness of the Company's internal quality control and risk management systems and, where applicable, the Company's internal audit, with respect to the financial information of the audited entity;
 - monitoring of the statutory audits of the annual and consolidated financial statements, in particular their execution;
 - review and monitoring of the independence of external auditors or approved audit firms or, where applicable, audit firms, in particular as regards the merits of the provision of non-audit services to the audited entity;
 - responsibility for the selection procedure of the external auditor(s) or audit firm(s).

Remuneration policy

The Company's compensation policy is derived from the one of Swiss Life Group. The Board of Directors is responsible for its establishment, and its main principles are summarised in a guideline communicated and made available to all employees on the Company Intranet.

The compensation policy underpins the performance culture required by the corporate strategy and forms part of the Human Ressources policy. The aim is to retain qualified employees and recruit new, highly skilled staff.

The compensation system is to be in line with the market environment and must be competitive.

The individual overall compensation takes into account the employee's professional skills, engagement and personal performance and is independent of age, years of service or gender. It is made up of a basic salary, a variable bonus based on achievement of the annual objectives, which is generally paid in cash and, in restricted cases, a deferred variable mid- to long-term compensation in the form of an equity compensation plan (RSU-Plan or a Deferred Cash Plan). The form and financing of fringe benefits and occupational pension solutions are market consistent and in line with demand.

In 2017, no fee or remuneration of any kind was paid to the members of the Board of Directors.

Group directives system

An integral part of Swiss Life's system of governance is the Group Directives System. It regulates the functional management throughout Swiss Life Group and defines the content-related and organisational principles, standards and topics.

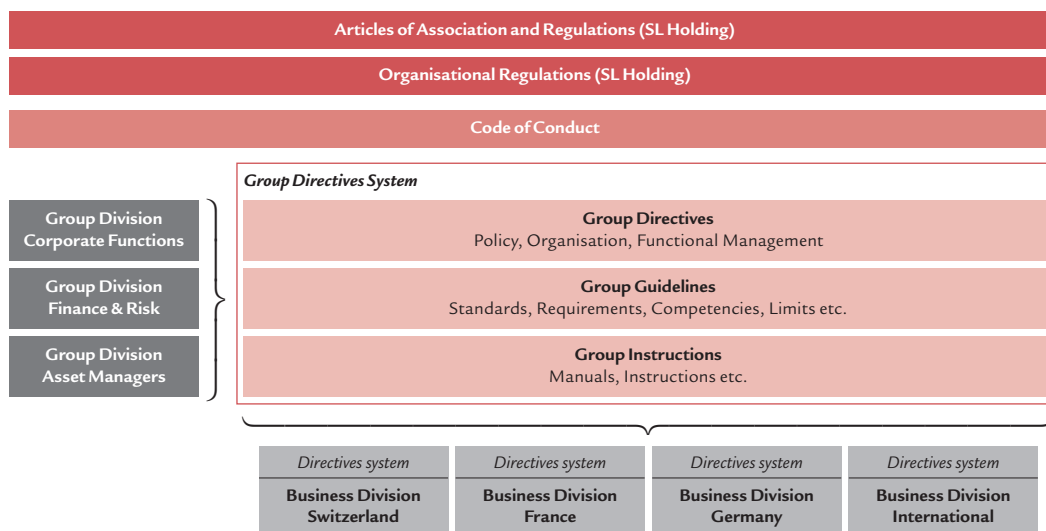

The Group Directives System is arranged into Group topics and contains Group Directives, Group Guidelines and Group Instructions:

- Group Directives set out the content-related principles (policy) and requirements as well as organisational and functional management aspects (including authorities' framework).
- Group Guidelines follow on from the Group Directive and set out more detailed content-based requirements and topics, as well as the minimum standards.
- Group Instructions are based on the Group Directives and Group Guidelines and set out concrete instructions in the form of manuals for example.

Following a standardised consultation process, involving management, functional stakeholders and responsible persons within the different units of Swiss Life Group, the Group Directives and Group Guidelines are put into effect by the Group Executive Board.

Swiss Life (Luxembourg) S.A. is responsible for the transposition of the internal regulations and the completion of the existing panel with specific local ones.

The following graph depicts the hierarchy of regulations and the Directives system within Swiss Life Group. The Company is included in the Business Division International; from a management perspective, Business Division International groups the insurance entities in smaller countries such as Luxembourg, Liechtenstein and Singapore as well as the distribution units in the United Kingdom, Austria and the Czech Republic.

This system of governance is reviewed internally on a quarterly basis. It is the responsibility of the Corporate Internal Audit function to plan and perform the audit, while any Management function of the Company can request ad hoc internal audit mission if deemed necessary.

The processes include a planning phase where the relevant topics are identified, how the audit has to be performed and documented as well as the manner in which the results have to be reported.

These organisational structures ensure that every material decision affecting the business is made by at least two people and can be adapted to changes in strategic objectives or changes in the business environment.

B.2 Fit and proper requirements

Swiss Life (Luxembourg) S.A. places great importance on ensuring that all persons who effectively run the undertaking and fulfil key functions are fit and proper for their position (Key Persons). Fitness and propriety are assessed on the basis of the principles set forth under the Luxembourg law on the insurance sector of 7 December 2015, notably by making reliance on the following elements:

- the professional qualifications, knowledge and experience of the Key Persons must be adequate to enable sound and prudent management (also referred to as Fit Requirements) and
- they are of good repute and integrity (also referred to as Proper Requirements).

Both elements together form the Fit and Proper Requirements.

The Key Persons have to comply with the Fit and Proper Requirements upon their appointment and throughout the duration of their office. To this end, a specific assessment will be performed prior to their appointment and, on an ongoing basis, in accordance with the terms described below.

For a Candidate, a person applying for a Key Person's position, the initial Fit Requirements assessment consists in:

- Interviews organised by the Head of the Human Resources to assess that the Candidate possesses sufficient qualification, experience and knowledge. The assessment will mostly focus on the skills relevant to the function being held by the Candidate. Without having expert knowledge in all the fields listed below, the Candidate must at least have a global understanding of the following matters:
 - Insurance and finance markets;
 - Business strategy and business model;
 - System of governance;
 - Financial and actuarial analysis and
 - Regulatory framework requirements.
- The Curriculum Vitae of the Candidate.
- A copy of the relevant degrees in connection with the function concerned.
- Additional third parties references can be requested.

Once in office, regular training and development plans are provided to maintain the required level of fitness.

The initial Proper Requirements assessment for a Candidate consists in:

- Obtaining the criminal record of the Candidate that is not older than three months after the date of issue.
- A declaration made by the Candidate confirming that:
 - The Candidate is not subject to any judicial investigation and measures or coming from a regulatory or professional body in particular in relation to the financial sector. This also includes disciplinary and administrative offences and sanctions.
 - The Candidate avoids performing activities that could create a conflict of interest or the appearance of a conflict of interest.
- Assessment of the honesty and financial soundness of the Candidate based on evidence regarding her/his character, personal behavior and business conduct.

It is possible to perform a re-assessment of the Fit and Proper Requirements in the following situations:

- when the Key Person discourages to perform the business in a way that is consistent with applicable legislation;
- when the Key Person presents a risk to perform activities that would constitute financial crimes such as money laundering or financing of terrorism; or
- when there are reasons to believe that the sound and prudent management of the business is at risk.

B.3 Risk management system

Swiss Life (Luxembourg) S.A. pursues an integrated, value-oriented risk management approach, involving both quantitative and qualitative elements. The goal is to protect customers' funds and ensure the best possible investment of risk capital, while complying with the regulatory requirements and taking into account the challenging economic conditions.

Risk management is a key component of Swiss Life's management process. The respective committees of the Corporate Executive Board and the Board of Directors monitor and take decisions in the area of risk management; these are then incorporated into the annual planning process of Swiss Life. On the one hand, they comprise qualitative assessments relating to the strategy, to operational risks and to the Internal Control System. On the other hand, quantitative elements, such as risk budgeting and investment strategy, are included in asset and liability management. Based on risk capacity and risk appetite, while taking account of regulatory provisions, limits are set in Swiss Life Group for the financial risks incurred, according to which the investment targets are set.

Risk management tasks are performed at all levels within Swiss Life Group by corresponding bodies, such as the Investment and Risk Committee at the level of the Board of Directors of the Swiss Life Group and the Group Risk Committee at the level of the Corporate Executive Board.

Analogously, the Company performs these tasks on a local level.

Risk strategy

Swiss Life's risk strategy supports the business strategy and enables the Company to grow in its businesses and markets in a sustainable and profitable way.

Swiss Life seeks to take on those risks inherent to the insurance and pension business, that are well understood and for which the expected return compensates the shareholder adequately, i.e. to assume those risks with which the associated cost of capital can be earned.

Other risks inherent to the business that cannot be avoided, as operational risks for example, must be actively monitored and mitigated applying various techniques.

As a matter of principle, Swiss Life sets its risk appetite, i.e. how much risk it is willing to assume, in consideration of its risk capacity. The risk appetite shall not exceed the risk capacity, i.e. the amount of risk that can be taken in order to run the business in a sustainable way.

Risk management objectives

Key components of risk management are the systematic identification, analysis, assessment, monitoring and management of risks as well as their reporting.

Risk strategy techniques

For the management of risks, the following techniques are applied at Swiss Life:

- Risk avoidance is the systematic avoidance of undesired risks (those expected not to compensate the shareholder adequately). Since some of them are connected with desired risks, the below mentioned techniques are applied subsequently;
- Risk mitigation is the systematic reduction of existing risks. This can be achieved for example by hedging undesired exposures through the purchase of financial instruments or by the implementation of controls;
- Risk diversification reduces risks by accepting risks, which are similar but not fully correlated. The overall risk is then lower than the sum of the individual risks;
- Risks are limited by setting thresholds so that the potential loss is limited, for example by limiting the equity exposure or by limiting the size of insurance coverage granted;
- Risk transformation is changing the character of an existing risk as through the purchase of reinsurance cover;
- Risk acceptance is the conscious decision to accept a risk, if necessary after application of the above risk techniques.

The application of these techniques varies by risk type and combinations of them may be required in addressing specific risks.

Risk governance – Guiding principles

Responsibility for managing risks is an integral element of all roles and activities throughout Swiss Life. Key principles are:

- *Ownership and accountability*: roles and responsibilities and minimum control standards for risk takers and risk controllers are clearly defined and communicated;
- *Compliance with regulatory requirements*: external legal and regulatory requirements must be met at all times and in an efficient manner;
- *Coordination and reliance* among different assurance functions, such as ongoing exchange between Risk, Compliance and Audit;
- *Independence*: clear separation between risk taking and risk controlling/assurance functions while maintaining strong links to the business.

Risk governance – lines of defence

Swiss Life's organisational structure can be viewed as three "lines of defence" ensuring independent risk monitoring and control activities.

The first line of defence is the responsibility of the business (risk takers) and includes (but is not limited to):

- Senior management
- Process owners
- Control owners

The second line of defence concerns those responsible for risk oversight and risk guidance (risk controller i.e. risk measurement / monitoring) including the corresponding reporting:

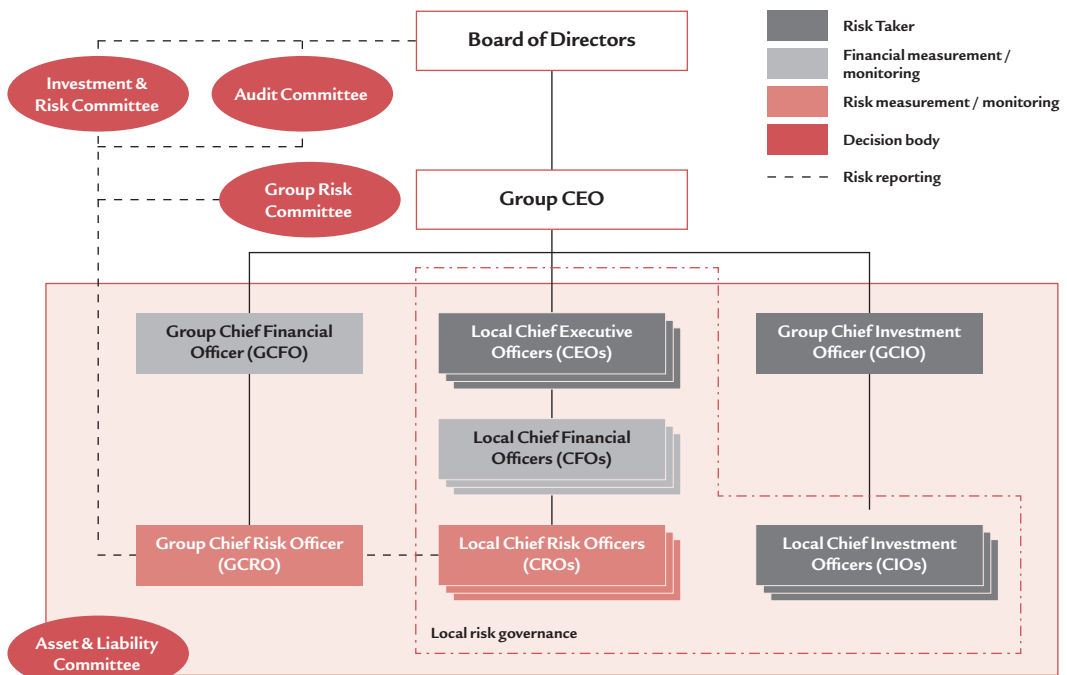

- Risk management functions
- Compliance
- Other control functions

The third line of defence is independent assurance of the effectiveness and efficiency of risk management processes (among others). This assurance is the responsibility of:

- Internal audit
- External audit

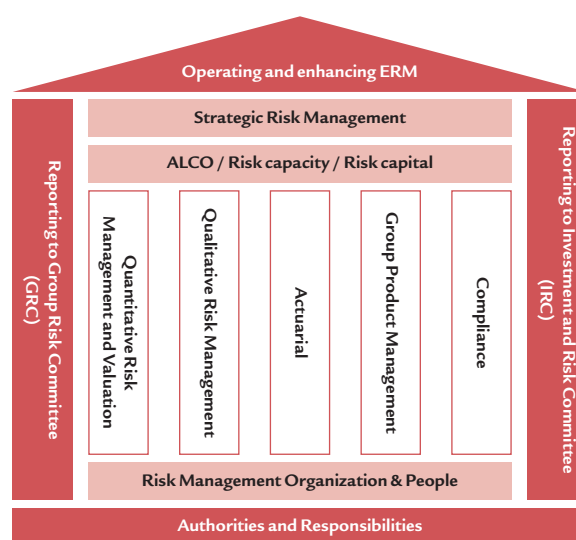

Boards and Committees

Risk management tasks are performed at all levels within Swiss Life Group by corresponding bodies, such as the Investment & Risk Committee at the level of the Board of Directors of the Swiss Life Group and the Group Risk Committee at the level of the Corporate Executive Board as shown below. In the local entities, respective risk governance is in place.

Risk management framework

The risk management framework as depicted below serves to operate and enhance the Group's Enterprise Risk Management (ERM) and to achieve the stated goals. The authorities and responsibilities are defined in the Articles of Association and Regulations, in the Organisational Regulations of Swiss Life Holding and in the Directives systems. They provide the foundation to operate the Group's Enterprise Risk Management.

Quantitative risk management and valuation

The emphasis in the framework for the quantitative risks is put on the insurance businesses and relies on economic principles.

If possible and meaningful, risks are measured and quantified (quantitative risk management). Otherwise a qualitative assessment for the identified risks has to take place (qualitative risk management).

Risks should be quantified as far as possible, based on generally accepted methods. Risk valuation models are not static and have to be continuously improved.

Different forms of financial terms may occur:

- Preferably risk is measured according to probabilities and the corresponding extent of negative drawdowns;
- Possibly risk is measured as the impact of specific scenarios with an assigned probability that is subject to experience and judgement.

The methods to assess the individual quantitative risks are outlined in the guidelines on quantitative risk management:

- *Market risk*: Interest rate risk (covering also Asset and Liability Management (ALM) risk and interest rate spread risk), equity risk, currency risk, real estate and alternative investment risk;
- *Credit risk*: Migration risk (covering also default risk), concentration risk (with respect to counterparty, industry and geography);
- *Insurance risk*: Mortality, longevity, disability, recovery, surrender, costs, capital option risks;

– *Liquidity risk* (especially funding risk) is covered within the ALM process by stress scenarios. Liquidity is continuously monitored.

Risk management framework – ALM process

The trade-off between risk and return in the insurance business (where the asset risk is borne by the shareholder) is steered and controlled in the Asset and Liability Management process.

Qualitative risk management

Qualitative risk management covers strategic risks, emerging risks and operational risks. In these areas, the risks are difficult to quantify or a general quantification approach is not established yet in the insurance sector. Where appropriate, the identified risks are addressed by the Internal Control System.

Strategic Risk

Swiss Life uses analytical methods to ensure that strategic risks are dealt with adequately in what continues to be a very challenging economic environment. In its strategic risk management process, Swiss Life incorporates all the information on risks and the risk/return characteristics in its strategic decisions. A thorough understanding of the interplay of individual risks is essential to take into account the factors influencing risks during strategy development so that these factors can be steered appropriately.

Emerging Risk

With emerging risk management, newly developing or changing risks and their influence on the existing risk environment are monitored and analysed. Emerging risk is a dedicated risk category, which has strong interaction with other risk types as insurance risks such as mortality, longevity and disability. Often, consequences of emerging risks are influencing triggers of other risk types in both ways, positive or negative. From a risk management perspective, those consequences, which have an impact on the business have to be analysed, understood and monitored over time. The result of the analysis is considered in the strategic risk management process.

Operational Risk

Operational risk is an inevitable consequence of being in business. The aim is not to eliminate every source of operational risk but to provide a framework that supports the identification and assessment of all material operational risks and potential concentrations in order to achieve an appropriate balance between risk and return. Sound operational risk management (which includes information security and IT risk management as well as business continuity management) and an effective Internal Control System are an integral part of creating sustainable value for shareholders.

The Swiss Life's Internal Control System framework is described in section B.4.

Risk steering and Swiss Life's comprehensive system of limits

Swiss Life has set up a comprehensive system of limits to capture and reflect the nature of the underlying risks.

Quantitative Risk

- The risk appetite is set on Board of Directors level by the Investment & Risk Committee and is expressed as Swiss Solvency Test (SST) ratio limit for Swiss Life Group and for Swiss Life AG;
- This risk appetite is cascaded down through unit specific SST ratio limits (which ensure in aggregate adherence to the SST ratio limit for Swiss Life AG) set by the Group Risk Committee and specific risk capital and exposure limits for units set by the Asset & Liability Committee (ALCO);
- For credit risk, rating-dependent exposure limits avoid concentration risk of counterparties;
- Monitoring is performed through two key reports on both unit and consolidated level. As part of the ALCO process, additional local constraints (such as Solvency II, tied asset coverage, etc.) are monitored and managed locally;
- Within the asset managers division, additional limits (including monitoring) are established to operationalise ALCO limits and to therefore ensure adherence to the ALCO and – ultimately – SST limits.

Qualitative Risk

- Strategic and operational risks have quantitative risk tolerance levels and thresholds.

Actuarial

- Insurance risk is managed through an underwriting process with limits and thresholds.

Product Management

- Profitability hurdle rates on unit and product level through pricing policy;
- Local product developments exceeding certain thresholds are subject to a Group approval process.

Risk Management function

The Risk Management function is not isolated but an integral part of the overall management activities of Swiss Life (Luxembourg) S.A. as it is within Swiss Life Group.

The Risk Management function should not only analyse the developments of the past but should also provide the senior management with the analysis of future risk aspects.

The local Chief Risk Officer (CRO) is heading the Company's Risk Management function.

The responsibilities of the local Chief Risk Officer are the coordination of tasks, standards, processes and insuring consistency across the Company.

The responsibilities of the local Chief Risk Officer in the context of quantitative risk management are:

- ensuring the establishment of an appropriate risk management in the relevant unit;
- processing and solving risk management issues within the relevant unit;
- representing the relevant unit in risk management issues within and outside the Company in consultation with Group Risk;
- reporting according to the instructions outlined in the group guideline on risk reporting;
- implementing the respective requirements of the Group directives and guidelines into their directives system by taking into consideration local law, local specifications and business activities;

–ensuring that the necessary human resources are available in terms of numbers, skills, knowledge and experience.

The final functional management is in the responsibility of the Group Chief Risk Officer. The Risk Management functions are established at all levels with the respective responsibilities. The Group and local Risk Management functions support the risk management bodies (Group Risk Committee and Investment & Risk Committee) and ensure the adherence to and the compliance with the respective Group and local directives.

As part of the global documentation presented to the Board of Directors, the Company's Chief Risk Officer presents a CRO report including either mandatory and spontaneous communications in relation with Risk management topics or on specific Board of Directors requests.

Own Risk and Solvency Assessment

Pursuant to Article 75 of the law on the insurance sector of 7 December 2015, the Company performs an Own Risk and Solvency Assessment (ORSA) which is embedded Company's decision-making and risk management process.

The ORSA consists in a forward-looking assessment of the Company's risk and solvency position over the planning period, comprising:

- an assessment of the continuous compliance with the Solvency Capital Requirement and Technical Provisions;
- an assessment of the significance of the deviations between the Company's own risk profile and the assumptions underlying the Solvency II Standard Formula;
- an assessment of the Overall Solvency Needs taking into account the Company's risk profile and risk tolerance limits.

The quantitative assessment of the Overall Solvency Needs is performed by taking the results of scenarios and stress-tests into account and is supplemented by a qualitative description of the Company's risk profile. The Overall Solvency Needs assessment covers all material risks the Company is exposed to and is performed considering a number of scenarios. Those are selected by the Board of Directors consistently with the Company's risk profile taking into account a range of developments relevant for the business such as changes in the economic environment, the resulting evolution of the risk profile and projected management decisions in accordance with the business strategy.

The ORSA is an integral part of the risk and capital management of the Company and is embedded in its decision-making process. The results of the ORSA are an input to the strategic planning process, which sets strategic orientation of the Company over a three year time horizon.

The ORSA is performed at least on an annual basis in accordance with the schedule of the mid-term planning process. In addition, a non-regular ORSA might be required in case of specific internal or external events (e.g. the start-up of a new line of business, portfolio transfers or major changes in the asset structure or financial market conditions). The results of the ORSA are included in the ORSA report.

In 2017, the Company produced its second official ORSA report duly approved by the Board of Directors and submitted to the CAA.

B.4 Internal control system

Swiss Life's Internal Control System (ICS) consists of the entirety of procedures, methods and measures prescribed by the Board of Directors and the Corporate Executive Board to ensure the orderly conduct of business. The focus is on the reliability of financial reporting, the effectiveness of business processes and compliance with laws and regulations issued to protect the Company's assets.

Swiss Life Group established an effective Internal Control System as part of the overall qualitative risk management to mitigate financial reporting risks, compliance risks and operational risks. Swiss Life's Internal Control System essentially comprises the following parts as outlined in the Internal Control System Group Guideline: the Internal Control System framework, the internal control management process and the associated roles and responsibilities.

The Company implemented and operates the Internal Control System locally within the standards of Swiss Life Group.

The Internal Control System framework contains the description and documentation of:

- process-level control measures (measures implemented in business processes to mitigate financial reporting, operations and compliance risk),
- entity-level control measures (measures implemented to control compliance with external and internal laws, regulations and standards),
- the IT control framework (framework to ensure the completeness, accuracy and integrity of business transactions which are performed or supported by applications) and
- minimum requirements for end-user computing tools.

Key procedures

In order to be able to efficiently maintain and manage the Internal Control System, the internal control management process has been defined. It consists of four steps (scoping, documentation, control assessments and definition and tracking of measures) and is performed on an annual basis.

To ensure a complete implementation of the Internal Control System framework and the internal control management process, the respective roles have been defined to support management on Internal Control System related questions. The roles include the Group Qualitative Risk Management on the level of Swiss Life Group and, on a local level, the Internal Control Officer, the Compliance Officer and the IT Control Officer.

Material units and business processes are identified in a structured scoping approach on a yearly basis. During scoping, the materiality of accounts in the financial statements, external and internal laws, regulations and standards and the operational process landscape are reflected.

Relevant business processes as well as respective Internal Control System key controls are documented and regularly reviewed regarding their actuality. Local risk controlling and group risk functions (second line of defence) support the process owners in documenting processes and conducting yearly risk and control self-assessments as well as in tracking improvement measures and mitigating activities. Internal Control System key controls are assessed once a year regarding control design (control concept and documentation) and control performance (effectiveness of controls in daily operations). Where control weaknesses are identified, improvement measures

and mitigating activities have to be defined. The implementation of these measures and activities is tracked.

Reporting procedures regarding the Internal Control System are established. Local management committees as well as the Group Risk Committee and the Audit Committee are regularly informed on the state of the control environment, on high operational risks and relating measures and activities.

Corporate Internal Audit and the external auditor (third line of defence) regularly perform audits for selected parts of the Company's effectiveness of the Internal Control System.

Local reports to Swiss Life Group include the scoping results, the results of the control assessments and on Internal Control System measures as well as on the status of the tasks of the Internal Control System cycle.

Group Qualitative Risk Management reports a consolidated view on Internal Control System measures and assessment results to the Group Risk Committee and to the Audit Committee. Frequency and content of those reports are defined in the respective instructions.

Compliance Function

The objective of the Compliance function in Swiss Life (Luxembourg) S.A. is:

- a conduct in line with compliance with legal and regulatory requirements and other external or internal regulations;
- the identification and avoidance of compliance risks, and thus of respective consequences, above all potential impacts on Swiss Life's reputation;
- a prudent over-all management at all times

by defining the necessary compliance standards and respective processes for all areas of the Company, supporting both employees and management in the implementation and enforcement thereof. Moreover, the role of the local Compliance function is prescribed to encompass the local regulatory requirements of Solvency II.

Compliance standards have been developed to implement and enforce material compliance topics, in accordance with the locally applicable legal and regulatory requirements. The Compliance function works at every functional level for adherence to the Group Directives System described in section B.1.

The Business Divisions define the reporting line between the Division Head of Compliance and the local Management while taking into consideration the independence of the function as second line of defence. In addition, the Division Head of Compliance has a functional reporting line to the Group Head of Compliance.

In application of the aforementioned principle, the Company's Compliance function is owned by the Head of Compliance. The local Head of Compliance is at the same time the Head of Compliance of the Business Division. This function, since its creation on 1 May 2015, is geared towards five different pillars for which the department is responsible for performing following tasks:

- Compliance with the regulation against money laundering and the financing of terrorism,
- Qualitative risk management (including the management of the Internal Control System),

- Compliance Audits & Controls,
- Regulatory Compliance including tax reporting activities (FATCA/CRS),
- Special Investments in the context of the Private Wealth business (private equity investments).

B.5 Internal audit function

The Internal audit function of the Company is performed by the Corporate Internal Audit of the Swiss Life Group in conjunction with the Audit Committee of the Company. By doing so, the Company ensures that:

- appropriate resources are allocated to the task,
- recognised internal audit standards are applied and fulfill the requirements of the law such as audit plan definition, adequate reporting of audit findings and recommendations,
- a follow-up process is in place through effective tracking tools,
- decisions of the Board of Directors of the Company comply with previous recommendations.

B.6 Actuarial function

The local Head of Actuarial Services ensures at all time that the Actuarial function is carried out by persons who have an adequate knowledge and understanding of the written insurance business, stochastic nature of insurance, the risk inherent in assets and liabilities, as well as an understanding of the use of statistical models commensurate with the sophistication of the methodologies and models applied by Swiss Life Group. The deepness of the knowledge required depends on the organisational level they belong to.

The Local Chief Actuary represents the Actuarial Function.

The Actuarial function at Swiss Life is defined in the following organisational levels:

- Group Actuarial Services
- Appointed Actuary
- Actuarial Board
- Actuarial Organisation and local Actuarial Services

Actuarial Board

The Actuarial Board consists of the Group Chief Actuary (Chairman), the local Chief Actuaries and the local Appointed Actuaries. The Board approves Actuarial Directives, Guidelines and Instructions from a functional point of view according to the Group Directives system.

Local Chief Actuary

The local Chief Actuary is responsible for performing all actuarial functions of the Company without any statutory duties in contrast to the Appointed Actuary.

Within the Company, the Head of Actuarial Services covers both roles.

The local Chief Actuary has to ensure the appropriateness of the Company's Actuarial function Guideline and the alignment with all local specific legal and regulatory requirements. As representing the Actuarial function, the local Chief Actuary is responsible for the assessment of the

technical provisions according to Solvency II principles and the assessment of reinsurance and underwriting policies regarding their appropriateness. An adequate segregation of responsibilities established within the organisational structure ensures that the people performing actuarial tasks are not simultaneously responsible for the execution and for providing an opinion on the adequacy of the executed item.

B.7 Outsourcing

A Group Outsourcing Guideline defines outsourcing requirements throughout the Swiss Life Group. It regulates the outsourcing to external service providers and describes the outsourcing process at Swiss Life.

Prior to the outsourcing of critical or important functions or activities as well as of any subsequent material developments with respect to those functions or activities, the outsourcing Swiss Life entity has to notify Group Qualitative Risk Management.

In case of outsourcing of critical or important functions such as risk management, compliance, internal audit or actuarial, the Company has to ensure the fitness and propriety of all persons working on that function. The outsourcing has to be approved by the Group Executive Committee or the Divisional Executive Committee.

The Company maintains an inventory about all outsourcings (internal and external) which contains information about the classification (“critical and / or important activity or function”), the performance evaluation of the outsourcing and the impact on Swiss Life, in case the service is not delivered as agreed (risk assessment).

The Company has three critical outsourcings (IT infrastructure management, outsourcing of HR payroll administration and outsourcing of the asset management for general assets not covering unit-linked assets) which all have the appropriate formal agreements and are monitored closely.

B.8 Any other information

All relevant information is provided for in the previous sections. No additional information is deemed necessary.

C Risk Profile

Risk is defined as the potential danger of an actual result deviating adversely from the expected result. If meaningful, material risks must be measured and quantified. If a risk cannot be quantified, a qualitative assessment needs to be done.

When measured, the risks are assessed by their contribution to the Solvency Capital Requirement (SCR) applying the standard formula from the Solvency II directive, Directive 2009/138/EC. In other cases, when this is not possible, the risks are identified, assessed and managed through the Company's qualitative risk management framework including the Internal Control System.

The detailed results from the Solvency II standard formula are given in section E.2. As a summary, the main risks for the Company are the market risk, more specifically equity and spread risk, and the life underwriting risk due to lapse risk. The risk profile of the Company has not changed in comparison to last year's evaluation.

The Company invests its assets according to the 'prudent person principle' as presented in Article 132 of Directive 2009/138/EC:

The general assets (i.e. not covering unit-linked contracts) are invested in regulated financial markets and no use of derivatives was made over 2017. A limit system by single counterparty and credit rating is in place to control single counterparty exposures and is included in the asset management mandate. The latter also integrates the management of the duration matching between assets and liabilities as well as regular reporting. At least once a year, the strategic asset allocation is defined in the ALCO process presented in section B.3, formally approved by the management.

The unit-linked investments follow the investment strategy provided in the contract conditions chosen by the policyholder. Moreover, the valuation processes in place aim at limiting any discrepancy in value between the technical provisions and the covering assets.

C.1 Underwriting Risk

Underwriting risk is mostly made of lapse risk linked to the policyholder behaviour, representing a risk capital of EUR 60.8 million with regards to an overall Life underwriting risk of EUR 80.2 million.

Expense risk exists in all insurance company and arises when the loadings are not sufficient to cover the administration expense basis. Expense risk is the second largest underwriting risk (capital of EUR 24.2 million). A close expense monitoring allows keeping the expense risk on an acceptable level.

Biometric risks such as mortality, longevity and disability have a limited risk contribution due to the reinsurance program in place and to the application of the contract boundaries as defined in the Solvency II framework (boundary of one year on the main part of the portfolio supporting these risks).

C.2 Market Risk

Market risk is mainly explained by equity and spread risk for risk capitals of EUR 110.5 million and EUR 67.4 million respectively in relation to EUR 178.5 million of overall market risk capital. These risks are the largest ones given the high level of dedicated funds mainly invested in equity funds and the high share of bond investments to cover non unit-linked products.

Interest rate risk is not material as the durations of the liabilities and their covering assets are almost matched. The duration gap is monitored on a regular basis in the risk management system. Moreover, the interest rate risk exposure is mitigated given two financial reinsurance treaties covering 19% of non unit-linked technical provisions.

The currency risk resulting from the international framework the Company is working in amounts to EUR 17.1 million. The currency risk capital is kept at a low level given the asset/liability currency matching in the Company's investment policy, limiting the net exposure in non EUR currencies for non unit-linked contracts. Unit-linked contracts also contribute to the currency risk.

For the general assets and non unit-linked products, monthly reports allow for an adequate monitoring of the market risk situation and ensure that corrective measures are put in place when necessary. In stressed market situation, ad-hoc validation can be triggered.

The concept of concentration risk is generic and can occur on different levels. The concentration risk measured by the Solvency II standard formula is the exposure to single ultimate counterparties. Monthly risk management reports exist monitoring among others the concentration risk in governmental exposures (excluded from the Solvency II definition). Concentration risk is not material for the Company.

Concentration risk can also occur on the liabilities when a specific type of industries is covered through contracts for multinational corporations or when a specific clientele in a particular country is targeted by the business strategy for example. Even if this concentration risk should be part of the life underwriting risk, it is addressed in the market risk together with the asset counterparty default risk in order to present a complete picture.

The different business activities need to be analyzed separately. For Global Employee Benefit Solutions, group contracts are diversified and cover all types of industries in different parts of the world. For countries considered as riskier by the Swiss Life reinsurance department, contracts are either refused or specifically priced. Global Private Wealth Solutions has by definition an inherent concentration risk. The risk is mitigated by a close monitoring of the key partners and the markets/countries where the business is written. The concentration risk arising from the liabilities is assessed as not material.

C.3 Credit Risk

Credit risk in the Solvency II framework is counterparty default risk with respect to cash positions, reinsurance treaties and amounts due from policyholders, including cash positions in the unit-linked assets.

Reinsurance treaties are in place with three different counterparties: biometric risk is reinsured by Swiss Life AG without any deposit foreseen, the other treaties are financial reinsurance treaties both secured by collaterals (pledged securities). These collaterals are at least equal to the receivables at all times, so that reinsurance receivables do not present a negligible counterparty default risk.

Regarding cash exposures, counterparty risk is primarily managed by the aforementioned counterparty exposure limits.

Counterparty default risk represents a risk capital of EUR 11.7 million.

C.4 Liquidity Risk

Liquidity risk is not covered explicitly in the market risk as defined in the Solvency II standard formula. It is assessed as not material.

The Company earns per year over EUR 180.0 million of written premiums from the Global Employee Benefit Solutions business. With such amounts of cash per year, liquidity problems are not likely to arise. In terms of investment policy, a certain minimum level of cash is always available in the accounts, also allowing facing liquidity risk. Repurchase agreements can be used to ensure short-term refinancing for unexpected liquidity shortfalls.

The expected profit included in future premiums as defined by the Solvency II framework is equal to EUR 10.7 million.

C.5 Operational Risk

Operational risk is included in the Solvency II standard formula and accounts for EUR 13.3 million.

Operational risk is inherent to insurance business. The management of operational risk is thus very important and is an integrated part of the qualitative risk management framework in Swiss Life. Operational risk is addressed more precisely by the Internal Control System in place.

C.6 Other Material Risks

Besides the risk categories described above, other risks are monitored in the Swiss Life risk management system.

As a result of the risk management process in the Swiss Life group, Strategic and Reputational risks are material for the Company as they could endanger the business ambitions of the Company. Mitigation actions are defined and monitored in the ORSA process.

Emerging risk is deemed non material for the Company.

C.7 Any other information

A number of economic sensitivities has been performed as of 31.12.2017.

The Solvency Capital Requirement has been estimated for stressed interest rate yield curves, initial equity and real estate shocks, spread shocks, and for a downward shock on the Ultimate Forward Rate.

In all the analysed sensitivities, the Own Funds are sufficient to cover the Solvency Capital Requirement.

D Valuation for Solvency Purposes

In this chapter, the Solvency II balance sheet as of 31.12.2017 is presented. It is compared to the statutory balance sheet as published in the Financial Statements. In the annex, both balance sheets are given in detail (Annexes Assets and Liabilities for the statutory figures and Annex QRT S.02.01.02 for the Solvency II balance sheet). Here, only the main items are shown.

D.1 Assets

According to Article 75(1)(a) of Directive 2009/138/EC, all assets shall be valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm's length transaction, that means with their fair values.

The table hereunder provides a summary of the assets side of the balance sheet as of 31.12.2017. Solvency II accounting values are compared to local accounting values. In the following, the main asset categories in accordance to the view from the Financial Statements are presented in detail.

In comparison to the official presentation of the Financial Statements, the accrued interests from bonds for an amount of EUR 16.4 million are shown under investments and not in the item 'Prepayment and accrued income' to allow for a meaningful comparison.

Assets

In EUR thousand

	Local accounting bases	SII accounting bases	Difference
Subscribed capital unpaid	6 000		-6 000
Intangible assets	7 330		-7 330
Investments	1 204 942	1 294 804	89 862
Investments for the benefit of life insurance policyholders who bear the investment risk	12 185 443	12 185 443	
Reinsurer's share of technical provisions	363 981	354 323	-9 658
Debtors	28 774	53 929	25 155
Prepayments and accrued income	98 396	78 753	-19 643
Other assets	3 463	3 064	-399
Total assets	13 898 329	13 970 317	

Unpaid capital

The unpaid not called-up capital is not considered in the Solvency II balance sheet. Given the approval of the local Supervisor, unpaid not called-up capital is added as ancillary own funds.

Intangible assets

Intangible assets are valued at zero unless they can be sold separately and they possess a market value as defined by Article 10(2) of the Commission Delegated Regulation (EU) 2015/35.

In the case of Swiss Life (Luxembourg) S.A., they are not accounted for in the Solvency II balance sheet.

Investments

Besides the investments in bonds and Collective Investment Undertakings, in this table investments also include deposits and other loans.

In the Solvency II balance sheet, investments are considered at market value following the Directive 2009/138/EC.

Investments in bonds and the different investment funds are valued using quoted market prices from active markets. Investment funds as of 31.12.2017 include money market, real estate, corporate loan and infrastructure funds.

Differences between Solvency II and local accounting values represent unrealised gains and losses on the investments at closing date (the difference between market values and accounting values).

Deposits and other loans are valued at accounting value, there is no difference in between Solvency II and statutory values.

Assets held for unit-linked assets

Assets held for unit-linked assets are taken at market value following the Directive 2009/138/EC.

There is no difference between local and Solvency II accounting bases as the market value for assets held for unit-linked funds is also used in the local accounting basis.

The 'private equity' positions included in the unit-linked contracts are valued using market valorisation models and techniques, resulting in no difference between statutory and Solvency II values. The approach is detailed in section D.4.

Reinsurer's share of Technical Provisions

The share of reinsurers in the Technical Provisions in Solvency II accounting basis is given by the best estimate of reinsurance contracts. The evaluation methodology will be described in the next section and is similar to the one used for the valuation of insurance best estimates.

The difference shows the valuation difference between local accounting values and Solvency II best estimates.

Debtors

In the Solvency II balance sheet, debts are considered at accounting value. The main part of recoverables arises from policyholders which are considered as short term. No market values are available; the valuation methodology used consists in using the accounting value which is known at closing date, the short-term aspect justifying this choice. The difference shown comes from two specific points:

- outstanding fees to be recovered which, in the local balance sheet, are still expressed as shares of unit-linked assets included in the investment positions, amounting to EUR 5.5 million;
- cash equivalent positions without counterparty shown under the cash positions in the local balance sheet, amount of EUR 19.6 million.

Prepayments and accrued income

In the Solvency II balance sheet, intangibles such as deferred acquisition costs are not considered. The accrued interests are directly shown under the investments. The residual positions are kept at statutory level representing short term prepayments.

Other assets

In the Solvency II balance sheet, other assets are considered at accounting value. Mainly cash positions compose the other assets items, for these positions market values equal accounting values.

The difference shown comes from positions that are accounted in the statutory accounts as cash and cash equivalent but without a known counterparty; for Solvency II purposes, these positions are integrated under Debtors.

D.2 Technical Provisions

The valuation of Technical Provisions is set out in the Commission Delegated Regulation (EU) 2015/35, Articles 17 to 61. Technical provisions are calculated as the sum of the best estimate and the risk margin per line of business.

The calculation of Technical Provisions uses and is consistent with information provided by the financial markets and generally available data on underwriting risks (market consistency). They are calculated in prudent, reliable and objective manner.

The projection model complies with the following requirements:

- it generates asset prices that are consistent with asset prices observed in financial markets;
- it assumes no arbitrage opportunity.

The calculation of technical provisions takes into account the value of financial guarantees and contractual options included in insurance policies. Any assumptions made with respect to the likelihood that policyholders will exercise contractual options, including lapses and surrenders, or realise the value the financial guarantee are realistic and based on current and credible information. Financial market developments are considered in the valuation.

Best estimate

The best estimate corresponds to the probability-weighted average of future cash-flows, taking account of the time value of money (expected present value of future cash-flows), using the relevant risk-free interest rate term structure. The calculation of the best estimate is based upon up-to-date and reliable information and realistic assumptions and performed using adequate, applicable and relevant actuarial and statistical methods. The cash-flow projection used in the calculation of the best estimate takes account of all the cash in-and out-flows required to settle the insurance obligations over the lifetime thereof.

Requirements regarding future management actions and policyholder behaviour are set out by Articles 23 and 26 of the Commission Delegated Regulation (EU) 2015/35. In particular, those assumptions should be realistic, consistent with past experience and future expectations, and based on credible information.

The basic risk free interest rate term structure used for the discounting of cash flows in the calculation of technical provisions, is delivered by EIOPA.

In the Solvency II framework, liabilities are valued using models. Two valuation approaches are used:

- a projection model for the calculation of the best estimate as defined above,
- the statutory provision for a limited part of the liabilities, according to the Solvency II proportionality principle.

99.7% of statutory technical provisions are valued using the projection model. Stochastic calculations are used for the valuation of significant options and guarantees (policyholder profit sharing for example).

Projections take into account contract boundaries as defined in the Technical Specifications for the preparatory phase and CAA recommendations.

The projection model uses the following assumptions:

- Economic scenarios introduce economic assumptions in the stochastic part of the projection model. Based on EIOPA assumptions, yield curves, inflation rates and actualization rates are given for 2 000 simulations. Scenarios integrate four currencies: EUR, USD, CHF and GBP.
- Expense assumptions are fixed on a yearly basis. Starting point are the observed expenses for the last year, which are allocated in different expense classes and to the different product lines using keys. The best estimate only takes into account recurring expenses which are linked to the existing contracts.
- Mortality assumptions are fixed depending on the product type (death, survivor or annuity).
- Morbidity and disability assumptions are established based on the experience of the Company and of its reinsurer.
- Lapse rate assumptions are reviewed on a yearly basis based on historic observations. These rates are fixed per product line.

Assumptions used in the calculation of Technical Provisions are reasonable, justifiable, consistent over time and based on the risk characteristics of the underlying portfolio (Article 22 of Commission Delegated Regulation (EU) 2015/35).

The same model described above is used to determine the Solvency II value for reinsurance.

Risk margin

The aim of the risk margin is to ensure that the value of the Technical Provisions is equivalent to the amount that insurance undertakings would be expected to require in order to take over and meet the insurance obligations.

The following requirements regarding the risk margin calculation are met:

- The calculations are performed net of loss absorbing capacity of technical provisions, and gross of the loss absorbing capacity of deferred taxes.
- The risk margin is allocated to the relevant lines of business in a way that reflects their contribution to the Solvency Capital Requirement.

The risk margin is calculated using a proportional approach as suggested by EIOPA as simplified method 3. The proportionality factors are different for unit-linked and non unit-linked products.

Level of uncertainty in the amount of technical provisions

Random annual fluctuations of the insurance benefits, the lapse behavior of policyholders and the profit sharing rules could lead to portfolio variation. Changes in policyholder biometrics or lapse risks lead to high level of uncertainty in Technical Provisions. Therefore, the assumptions used for the projection model are reviewed regularly.

Most assumptions are reviewed on a yearly basis.

Technical Provisions

In EUR thousand

	Unit-linked	Other life insurance (with and without profit sharing)	Total
Statutory technical provision	12 276 843	1 384 019	13 660 862
Reinsurer part in technical provisions	91 400	272 581	363 981
Net statutory technical provisions	12 185 443	1 111 438	13 296 880
Best estimate of gross technical provisions	12 066 675	1 437 100	13 503 774
Risk margin	43 669	14 142	57 812
Gross technical provisions including risk margin	12 110 344	1 451 242	13 561 586
Best estimate of reinsurers part in technical provisions	88 480	265 843	354 323
Net technical provisions including risk margin	12 021 864	1 185 399	13 207 263

Differences between Solvency II and accounting values come from the different valuation models.

For unit-linked business, the difference arises from the recognition of future margins in the best estimate; in opposition to the simple counter value of the unit-linked assets in the local accounting balance sheet.

For the other life insurance provisions, the Solvency II value is higher than the statutory technical provision, reflecting the use of a reference yield curve for calculating actual values and also the impact of certain assumptions such as observed expenses.

Impact of transitional measures

Only the volatility adjustment is used in the official Solvency II calculations. Quantitative impact of its use is given in Annex QRT S.22.01.21.

No matching adjustment or transitional measure has been used.

D.3 Other Liabilities

The following table provides the values of other liabilities as at 31.12.2017.

Other Liabilities

In EUR thousand

	Local accounting bases	SII accounting bases	Difference
Provisions for other risks and charges	509	48 625	48 117
Creditors	97 391	97 391	0
Accruals and deferred income	524	524	0

Provisions for other risks and charges

Provisions for other risks and charges include deferred tax liabilities. This is an additional item compared to the balance sheet in the local accounting bases. Deferred tax liabilities arise due to the recognition of future results namely through unrealised gains and losses on assets and through the recognition of liability best estimates. These future results will have to face tax payments when materialising and need to be recognised in the Solvency II balance sheet. Deferred tax liabilities are equal to EUR 48.1 million.

Provisions for other risks and charges excluding deferred tax liabilities are taken at accounting value. No market values are available; the valuation methodology used consisted in using the accounting value which is known at closing date.

Deferred tax liabilities are introduced in the balance sheet, the value is defined through the valuation methodologies on assets and liabilities.

Creditors

Creditors are taken at accounting value. The main part of debts arises from short-term debts towards policyholders. The used valuation methodology consists in using the accounting value known at closing date.

Accruals and deferred income

In the Solvency II balance sheet, accruals are taken at accounting value. The used valuation methodology consists in using the accounting value which is known at closing date.

D.4 Alternative methods for valuation

Alternative methods for valuation are used for unquoted investments.

International Private Equity and Venture Capital Valuation guidelines are the basis for the fair valuation of holding companies, representing the major part of the Company's unquoted investments. Private bonds / debts instruments are measured using the amortized cost approach as defined by the International Accounting Standards Board.

E Capital Management

E.1 Own Funds

Composition of Own Funds

The following table details the Own Funds as of the end of the reporting year.

Own Funds by Tier

In EUR thousand

	Tier 1 (illimited)	Tier 1 (limited)	Tier 2	Total 31.12.2017	Total 31.12.2016
BASIC OWN FUND ITEMS					
Ordinary share capital	17 000			17 000	17 000
Subordinated liabilities					11 121
Reconciliation reserves	232 161			232 161	236 695
Reserves	97 313			97 313	81 693
SII reconciliation reserve	129 146			129 146	139 381
Retained earnings					
Profit from the year	18 731			18 731	15 620

ANCILLARY OWN FUND ITEMS					
Unpaid not called-up capital			6 000	6 000	6 000
Basic own funds			6 000	6 000	6 000

Basic own funds

Basic own funds items are equal to the own funds determined as excess of assets over liabilities. They also include the subordinated liabilities, if any. Deductions to be considered represent the expected dividend payment based on the result from year-end 2017.

Ordinary share capital is taken at accounting value. The unpaid not called-up capital is not considered in the Solvency II framework, it is re-integrated as ancillary own funds.

The Reconciliation reserves include Reserves and the Profit from the year which are also included in the statutory accounts. The Solvency II reconciliation reserve aims at presenting balanced accounts and arises from the market valuation of the balance sheet.

Deductions represent the expected dividend payment based on the yearly result.

In comparison to last year, own funds are lower due to different effects:

- The economic environment influenced the own funds positively mainly following lower spreads than in 2016, counterbalanced by negative impacts from the higher yield curves and foreign exchange rates changes.
- The New Business written in 2017 and the changes in the stock impacted the own funds positively, mainly following the high volumes written in the Global Private Wealth Solutions business.
- The own funds are influenced negatively by higher recurring administration expenses in comparison to last year. Reviewed lapse assumptions counterbalanced partly this effect.
- Own funds are decreasing following structural changes in the own funds with an expected dividend payment based on the year-end result 2017 and the repayment of the subordinated

loans in 2017 (repayment of nominal value of EUR 10 million as of 17 November 2017 with a mark-to-market value of EUR 11.1 million in 2016).

Ancillary own funds

Ancillary own funds are composed by the unpaid not called-up capital as approved by the local Supervisor.

Ancillary own funds have not changed versus 2016.

Quality of Own Funds

For Solvency II purposes, own funds are categorised following their level of quality as shown above.

Except from the ancillary own funds, in terms of classification, all own fund items are classified with the highest quality, in Tier 1. The ancillary own funds, representing the unpaid not called-up capital, are classified in Tier 2.

Eligible Own Funds

Regarding the solvency, the Own Funds are fully eligible to cover the Solvency Capital Requirement.

For the Minimum Capital Requirement, ancillary own funds are not eligible.

Eligible Own Funds

In EUR thousand

	Tier 1	Tier 2	Total 31.12.2017	Total 31.12.2016
Available Own Funds	249 161	6 000	255 161	270 815

Eligible Own Funds to cover MCR	249 161		249 161	264 815
SCR				
Eligible Own Funds to cover SCR	249 161	6 000	255 161	270 815

E.2 Solvency Capital Requirement and Minimum Capital Requirement

The Solvency Capital Requirement is calculated based on the Solvency II standard formula. Operational risk is determined based on premiums, reserves and expenses for unit-linked business.

SCR

In EUR thousand		
	31.12.2017	31.12.2016
BASIC SCR	223 068	200 616
Adjustment for the loss absorbing capacity of technical provisions	-6 000	-6 971
Adjustment for the loss absorbing capacity of deferred taxes	-48 117	-55 127
SCR for operational risk	13 320	12 731
SCR	182 271	151 248
MCR	82 022	68 062

The following table details the different components of the Solvency Capital Requirement, split by risk module.

SCR Detail

In EUR thousand		
	31.12.2017	31.12.2016
SCR for market risk	184 113	165 900
SCR for counterparty default risk	11 725	11 055
SCR for life underwriting risk	81 585	72 558
Basic SCR	223 068	200 616

The highest risks are coming from market risk, equity risk representing the highest capital needs. This is explained by the high volume of dedicated funds. Spread risk is high given the high exposure of the Company in bonds.

The impact of higher lapses for unit linked business is the driver for the life underwriting risk.

Some simplifications are used in the calculation of the different risk modules, namely for interest rate risk and spread risk.

The Solvency Capital Requirement increased in comparison to last year, mainly in relation with the volume increase. Higher exposure in Global Private Wealth Solutions in unit-linked business and increased bonds investments in the Global Employee Benefits Solutions portfolio explain the stronger capital requirement mainly for equity and for spread risk. Life risk and operational risk increase following the volume increase in 2017.

The Minimum Capital Requirement is calculated based on the standard model. In the end, the cap from the Solvency Capital Requirement is defining the required level of the Minimum Capital Requirement (45% of the Solvency Capital Requirement). The linear Minimum Capital Requirement is determined based on capitals at risk and technical provisions.

MCR

In EUR thousand		
	31.12.2017	31.12.2016
Linear MCR	127 862	118 518
Floor	45 568	37 812
Cap	82 022	68 062
Combined MCR	82 022	68 062
Minimum guarantee fund	3 700	3 700
MCR	82 022	68 062

The Minimum Capital Requirement follows the evolution of the Solvency Capital Requirement.

The following table indicates the solvency level given the Solvency Capital Requirement and the Minimum Capital Requirement as represented above. Both solvency ratios exceed the requirements.

In EUR thousand				
	Capital requirement	Eligible capital	31.12.2017 Solvency ratio	31.12.2016 Solvency ratio
SCR	182 271	255 161	139.99%	179.05%
MCR	82 022	249 161	303.77%	389.08%

The amounts of the Solvency Capital Requirement and the Minimum Capital Requirement as of 31.12.2017 are still subject to supervisory assessment.

E.3 Use of the duration-based equity risk sub-module in the calculation of the Solvency Capital Requirement

Swiss Life (Luxembourg) S.A. does not use the duration based equity risk sub-module.

E.4 Differences between the standard formula and any internal model used

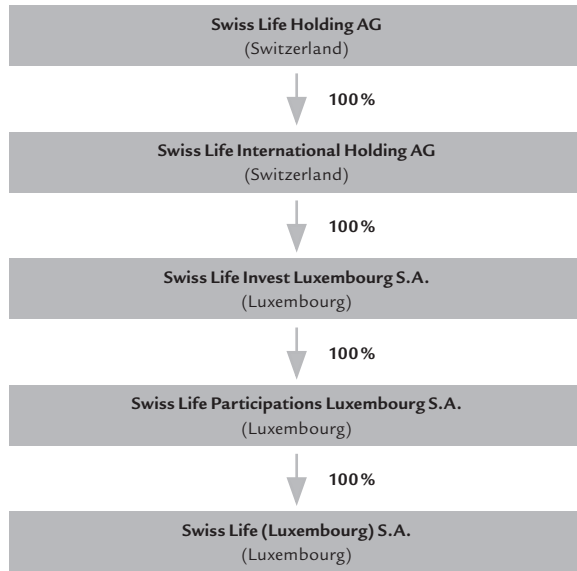

Swiss Life (Luxembourg) S.A. applies the standard formula.

E.5 Non-compliance with the Minimum Capital Requirement and non-compliance with the Solvency Capital Requirement

The precedent figures show that Swiss Life (Luxembourg) S.A. is compliant with the regulatory requirements in terms of available solvency capital.
